BBQ MINERAL SPONGE

BBQ mineral sponge is a unique, non-toxic natural mineral BBQ fat absorbent.

PRODUCT DESCRIPTION

The highly complex molecular structure of zeolite has a vast surface area with interconnected passageways, which absorbs and entraps the moisture, fats, grease and offensive odours often resulting from BBQ cooking. Absorbency of zeolite is very high - typically around 80-9%.

The natural zeolite granules contained in this product are pure and free flowing with minimal dust. The mineral is non toxic, natural, easy to handle and non-caking.

APPLICATION

1. For easy clean-up, line the drip tray with aluminium foil.
2. Apply a 10-15mm even layer of BBQ Buddy fat absorber over the entire surface of your barbecue drip tray.
3. You will know when it is time to change the fat absorber when the colour has completely changed or when the odour is present.
