

Blue Pacific **MINERALS**

NUFERT

NuFert is a slow release fertiliser produced using natural ingredients.

PRODUCT DESCRIPTION

Plant nutrients are injected into Zeolite granules through a special “charging process”. This protects added nutrients from leaching, providing a longer term, consistent supply. Plant roots then extract the nutrients from the Zeolite as the plant grows. This prevents damage to fine roots, making NuFert safe in any gardening situation.

APPLICATION

For Optimum results NuFert should be worked into the soil prior to sowing or planting to ensure that plant roots are in contact with the granules. One adult handful holds approx 50gms. 1 metric cup = 120gms For application rates please enquire.

NuFert®

FEATURES

- ◆ BioGro certified input for organics
- ◆ Slow release fertilizer
- ◆ No mess, easy-seal bag
