& NUTRIENTS

ABIOTIC STRESS

AgriFert[®]NutraBoost Gold™ is a premium liquid fertilizer that harnesses the power of fulvic acid, derived from rich vegetative matter sourced from the earth in Australasia.

This unique formula can be blended with essential micro-elements and chelated to provide your plants with the nutrients they need to grow strong and healthy.

Primary sectors:

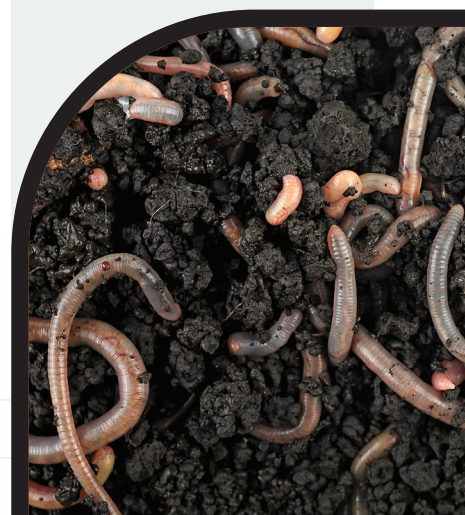

- Agriculture
- Horticulture
- Turf

FEATURES:

- Use as a foliar spray, soil drench or fertigation application
- Improves nutrient uptake
- Enhances root growth
- Improves soil structure
- Boosts plant immunity

	Includes liquid Fulvic			

With AgriFert® NutraBoost Gold™, you'll notice a difference in the health and vitality of your plants.

The fulvic acid in our formula provides a range of benefits, including improved root growth, increased nutrient uptake, and enhanced plant immunity. This means that your plants will be better able to resist disease and pests, and they'll grow faster and stronger.

Whether you're a professional grower or a home gardener, **AgriFert® NutraBoost Gold™** is the perfect solution for anyone who wants to provide their plants with the best possible care.

Fulvic acid is a naturally occurring organic substance that has been shown to have a positive impact on plant growth

Fulvic acid works in several ways to enhance plant health and productivity:

Improving nutrient uptake: Fulvic acid helps to make nutrients more available to plants by breaking down complex molecules and making them easier for the plant to absorb. This results in improved nutrient uptake and utilization, which is essential for healthy plant growth.

Enhancing root growth: Fulvic acid has been shown to stimulate root growth, which can lead to stronger and healthier plants. This is because healthy roots are better able to absorb water and nutrients from the soil.

Improving soil structure: Fulvic acid can also help to improve soil structure by increasing the availability of micronutrients and promoting beneficial microorganisms in the soil. This results in improved soil fertility and better growing conditions for plants.

Boosting plant immunity: Fulvic acid is thought to enhance plant immunity by improving the plant's ability to defend itself against disease and pests. This is because fulvic acid is a powerful antioxidant that can help to neutralize harmful free radicals in the plant's cells.

Overall, fulvic acid is a versatile and powerful substance that can have a significant impact on plant growth and health. When used as a liquid fertilizer, it can help to provide plants with the nutrients they need to thrive and reach their full potential.

USAGE

For foliar application it is best to spray early in the morning or later in the day to avoid hot and direct sunlight.

TYPICAL CROPS	RATE	DILUTION	APPLICATION NOTES
Garden	20 mls	per litre	Apply by sprayer or watering can - until soil is soaked - or on foliage to run off
Pasture	5-25L/Ha	1:10	Add to each Nitrogen or Fertiliser application
Crops	20-30L/Ha	1:10 up to 1:100	Add to chemical or fertiliser applications

PRODUCT COMPOSITION

		UNITS
Appearance	Dark brown liquid	
Smell	Earthy	
pH	7.5	
Solids	-	% w/v
